

> I joined the Decathlon IT community since one month. I am part of the e-commerce team as senior staff engineer working on the architecture of the Chopper platform.

> Previously, I worked 12 years for the french insurance aggregator LesFurets.com and various software vendors in Paris.

> Most of the time, I will be working from Paris in our new office, but I will frequently commute to work in Lille.

> My favorite software topics are meta-modeling and DSL (domain specific languages): I'm working on doov.org, an OSS toolkit for writing UI logic, business rules or data mapping in natural language.

> I like going to tech conferences as a speaker or just attending new presentations and sharing with peoples.

> On the sport side, I am restricted in my practice because I have serious problems with my left knee. I was doing fencing, and now I mainly practice cycling to commute in Paris and mountain biking / DH when I leave town.

> I love the innovations of the cycling community: 3D printed carbon frames, e-bikes, connected bikes ... It fits my passion for engineering and computer science.
